

The conceptual scenarios of seeing a doctor in hospital

20195732 李御霖

First everyone need to **register** on Internet or the reception area in the hospital and They can see the doctors who is working. Then **searching for the department** we need to go by watching the map or asking for help to others. Second, when They arrives the department they can have **see the doctor and do some diagnosis**.

If there is **no more physical examinations** some of them will finish the process. If them have ,Them need to **pay some fee according to the checklist and have a examination**. After that they need to go back to department **see the doctor again**. If they need to go to another department they need to **repeat the the above three steps**. In the end they will **receive a treatment**(take medicine or be hospitalized) and pay the fee of it.
